

# Winscribe for Law Enforcement

## Speech-Driven Reporting for Law Enforcement Professionals

**It's no secret that officers spend a great deal of time completing reports. Have you considered how speech technology can enhance field-based reporting and improve officer productivity?**

Today's law enforcement agencies are looking for solutions to help them stay one step ahead of crime. As such, Winscribe develops speech technologies that make the job of law enforcement reporting easier, while providing anywhere and anytime access for dictating reports and recording statements. With Winscribe, your agency will be able to more effectively document, collect, manage, and archive dictated and recorded audio and reports – improving documentation processes and organizational efficiency.

### Digital Dictation & Mobile Speech Technology

Winscribe Dictation is a digital dictation software system developed for organizations that are interested in streamlining their internal dictation and transcription workflow processes. Using a PC, a touch-tone telephone, a handheld digital recorder, smartphones or tablet device, the system enables police and other law enforcement professionals to record their dictations when required and from wherever they are – using the device that suits them best. Within seconds of completing the dictation, the file is automatically delivered for transcription.

Whether your agents are on the move between different sites, in the field, at court hearings, or in the office, they need solutions that are flexible and that accommodate the demand for mobile dictation – in order to keep productivity at a high level. Winscribe's mobile speech productivity solutions allow law enforcement professionals to dictate their work on the move, anywhere and at any time, with all the capabilities of desktop digital dictation. Winscribe supports applications for iOS and Android smartphones and tablets, as well as BlackBerry and Windows phones.

### Speech Recognition

Winscribe Speech Recognition (WSR) converts spoken words to text, resulting in significantly faster documentation and turnaround time for law enforcement professionals. WSR also assists law enforcement agencies that are looking to adopt more “paper light” business practices to digitally document and store information. WSR works by using a combination of vocabularies, pre-loaded topics (dictionaries), built-in commands and group-learning technology to enable fast and accurate voice recognition. Unlike speech recognition packages of yesteryear, WSR has a quick training period, is light on IT resources, and has a low edit rate.

*“The Winscribe system has been a wonderful upgrade, as compared to the previous dictation system we used. It is user-friendly, easy to run and works well.”*

**Deputy Dale DeKorte**  
Kent County Sheriff's Department

### Benefits of Winscribe's Speech Technology for Law Enforcement Professionals

Winscribe's speech productivity technology enables law enforcement professionals to:

- Ensure that critical information is recorded with the highest audio quality and accuracy
- Improve data confidentiality and security
- Securely and centrally manage recordings and transcribed data and reports
- Improve documentation workflow – in the office or on patrol
- Produce transcriptions and reports faster

# Winscribe Solution Overview

## Dictate Anywhere

Winscribe supports a wide range of non-proprietary industry standard input options including:

- Smartphones and tablets
- Touch-tone telephone
- PCs or notebooks
- Digital handheld devices

## Transcribe Anywhere

- Network based transcription or Internet transcription for remote working
- Work online or offline

## Report and Data Confidentiality

- Voice file encryption
- Secure and encrypted transmission
- No requirement for a VPN
- Full job tracking
- Configurable application timeout

## Integrate with Existing Applications

- Low risk implementation into existing document management environments
- Built-in software development toolkit and macro support
- Custom integration with third-party information systems
- Integration with word processing applications

## Spread the Workload

- Custom reporting for a complete picture of system status - get immediate data about dictations, whether in progress or complete
- Identify bottlenecks, quickly allocate work/resources when required, and eliminate work peaks and valleys
- Create typing pools for workload sharing and distribution
- Web-based management system - control transcription output in real-time, from anywhere

## Speech Recognition

- Front-end (client) and back-end (server) Speech Recognition options available
- Standalone speech recognition and workflow enhanced solutions
- Auto-formatting and ability to auto-populate third-party systems
- Document reports faster and easier - with high accuracy

## Winscribe Voice Forms

- Interactive computer telephony system
- Quickly file reports using a telephone or mobile phone
- Select form type and respond to prompted questions
- Flexible and easy form creation tool

## Multimedia Transcription

- Playback and transcribe from audio, video or DVD media
- Insert bookmarks to mark places in the file you wish to refer back to
- Supplement documentation with snapshots from videos
- Insert geotagged images with along with dictation and recorded statements

## Acquisition Options

- Traditional, on premise licensing enables you to have complete control over your Winscribe system and server
- Reduce IT costs and resources with Winscribe Cloud Services, a Software-as-a-Service licensing model that enables you to easily pay as you grow
- Additional subscription options available
